

LiCCo

project: The lower Saône valley

EVALUATION OF COASTAL RISKS.

DDTM 76

18 September 2014

Presentation from the DDTM

1) The DDTM (Departmental Directorate of Territories and the Sea)

–Interdepartmental decentralised service.

–340 departmental officers.

•Main areas of focus:

–Advising local authorities

–Town planning

–Habitat

–Development of the territory

–Evaluation of risks

Participation of the DDTM in the LiCCo project.

- The DDTM was requested by the *conservatoire du littoral* to work on the site of the Saône, focusing on risks of marine submersion and flooding.
- The DDTM drafts regulatory documents for those territories which are exposed to such risks.

Vienne et Sclé / L.TOPIN

Use of data produced by LiCCo

- Knowledge of the site as part of the DDTM's territorial knowledge.
- Data used when producing the PPRL.
- Data used regarding erosion of cliffs and the changing coastline, as part of the national strategy for management of the coastline and relocation of activities and assets.

The contributions of workshop exercises

- **Healthy collective competition**
- **Knowledge sharing**
- **Same level of information for all local stakeholders,**
(Elected representatives, State services, local authorities, public bodies...)
- **Compare expectations and problems of the various local stakeholders in the lower valley.**
- **Evaluation of risk and leadership of integrated coastline management, in the area and over a longer time scale.**

Relevance of reproducing and extending this approach.

- Approach could be reproduced along the whole of the Seine-Maritime coastline. Uniformity of the department's coastline. However, different contexts must be taken into account.
- The LiCCo approach fits perfectly into the national strategy for integrated coastline management.
- Locally, the LiCCo approach is being extended with the territorial project of the Saône led by the *conservatoire du littoral*, a partner of the DDTM.

Thank you
